Extremal Family 1 seed graphs

$m = 7$; $\max_G H(G) = 34$. Complete collection: 8 rooted classes and 4 underlying shapes.

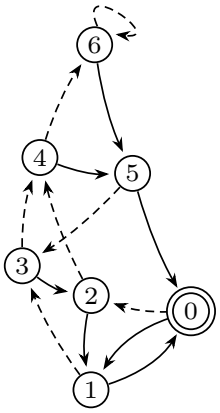

Root 0: double circle. Port 0: solid; port 1: dashed. Members of each underlying shape share one vertex embedding.

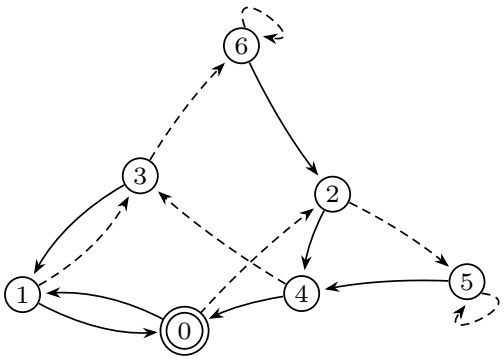

(a) Rooted class 1; underlying shape 2.

(b) Rooted class 2; underlying shape 4.

(c) Rooted class 3; underlying shape 4.

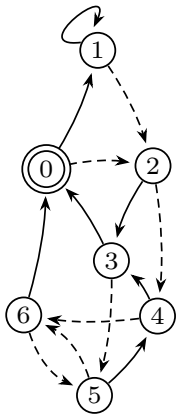

(d) Rooted class 4; underlying shape 1.

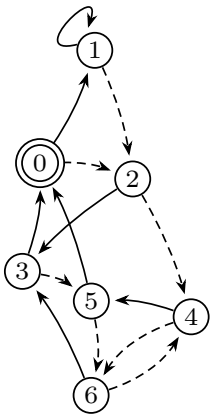

Extremal Family 1 seed graphs

$m = 7$; $\max_G H(G) = 34$. Complete collection: 8 rooted classes and 4 underlying shapes.

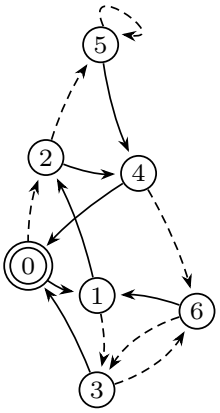

Root 0: double circle. Port 0: solid; port 1: dashed. Members of each underlying shape share one vertex embedding.

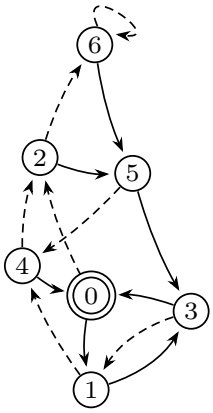

(e) Rooted class 5; underlying shape 3.

(f) Rooted class 6; underlying shape 4.

(g) Rooted class 7; underlying shape 4.

(h) Rooted class 8; underlying shape 4.
